### January: Employee Motivation

**Lift Truck Safety** — A 21-year-old OSHA requirement for forklift-operator safety training still confuses many employers when they try to set up a training program. The regulation does not clearly define the necessary contents, instructors or retraining components of a training program. However, companies have a variety of options. Read about options and other means, such as forklift rallies, to motivate employees to operate safely.

**Premiums and Incentives** — Some people seem to be born with a good safety attitude. Others have a poor perception of risk. Their bad habits can not only cause injury, but can also increase costs. Here, experts

give tips on the kinds of rewards that best motivate those with bad safety habits to change their ways.

**Employee Attitude Surveys** — Conscientious companies may think their safety house is in order. Their employees may have different opinions. Attitude and perception surveys help employers assess how employees view their safety environment. Read how surveys can take a safety temperature.

**Simulators** — Simulators help train workers in a variety of situations. A once complicated and expensive technology is now more accessible. Learn about new uses for simulators and why their popularity is increasing.
